Setup Instructions & Practical Suggestions 80

The reaming is a finishing operation for blind or through holes, when particular roughness and tolerance on diameter is requested and it is not obtained with the drilling. The choose of the correct reamer is conditioned by the drawing piece, type of machine and kind of material to work.

The SCAMI firm designs and optimizes the best solutions in precision of reaming field with the tools covered to ALVAN® brand. The ALVAN® tools comprise fixed and expandable reaming solutions for standard diameters from 5.80 to 200 mm and special solutions and designs on request.

# Integral Expanding Reamers

## Features & Benefits

- Series: 3620 - 2441 - 3610 - 2431 - 2201 - 2206 - 3627 - 3617
- Diameter range: 5,80 - 32,10 mm
- Available with central or radial through coolant
- Can be used for through or blind holes
- Cylindrical or Weldon shanks for improved concentricity (on request)
- High speed reamers for improved productivity

## Code Description of the Integral Expanding Reamers

**A** A= Series      2441  
                          3620  
                          2431  
                          2201  
                          2206  
                          3610  
                          3627  
                          3617

**B** B= Cutting material and coating

Code	Description
KL	Hard metal cutting edges K05
KN	Hard metal cutting edges K05 N coated
KC	Hard metal cutting edges K05 C coated
KA	Hard metal cutting edges K05 A coated
KK	Hard metal cutting edges K05 K coated
KH	Hard metal cutting edges K05 H coated
KR	Hard metal cutting edges K05 R coated
KT	Hard metal cutting edges K05 T coated
KD	Hard metal cutting edges K05 D coated
SV	Cermet cutting edges P10
SN	Cermet cutting edges P10 N coated
SC	Cermet cutting edges P10 C coated
SA	Cermet cutting edges P10 A coated
SK	Cermet cutting edges P10 K coated
SH	Cermet cutting edges P10 H coated
SR	Cermet cutting edges P10 R coated
ST	Cermet cutting edges P10 T coated

N.B. On request is possible supplied tools in Carbide K10 and Cermet P20

**C** C= Lead-in

**D** D= Optional request:  
           Z = oversized tapering  
           H = half circular face

**E** E= Diameter and tolerance

## HIGH SPEED FOR ALUMINIUM REAMING

Aluminium with silicon greater than 10% - brazed carbide with PKD

- Surface speed up to 1500 m/min
- When using PKD reamers a machine tool with high rigidity and absolute precision is a minimum requirement
- Each application must be assessed by our technical department

# LEAD-IN FOR STRAIGHT FLUTES

Lead-in 45° for standard speed

Lead-in 45° for high speed

"L" lead-in to reduce the feed of 40% compared with the values on pages 8-9

"F" lead-in to reduce the feed of 40% compared with the values on pages 8-9

"N" lead-in ideal for through hole. Is it possible to increase the feed up to 100% of the values on pages 8-9

Chipbreaker

# LEAD-IN FOR HELICAL FLUTES

## APPROACH ANGLES

MATERIAL TO WORK	TENSILE STRENGTH	APPROACH ANGLE*
Iron and mild steel (C < 0,2%)	50 Kg/mm <sup>2</sup>	G - A - E
Mild steel (C 0,2 < 0,3%)	60 Kg/mm <sup>2</sup>	N - A - E
Mild steel (C 0,3 < 0,4%)	70 Kg/mm <sup>2</sup>	N - A - E
Mild steel (C 0,4 < 0,5%)	80 Kg/mm <sup>2</sup>	N - A - E
Alloy steel	≤ 80 Kg/mm <sup>2</sup>	G - N - A - E
Alloy steel	90 Kg/mm <sup>2</sup>	G - N - E
Alloy steel	100 Kg/mm <sup>2</sup>	G - N - M
Alloy steel	> 100 Kg/mm <sup>2</sup>	G - N - M
Stainless and refractory steel	from 50 Kg/mm <sup>2</sup> to 90 kg/ mm <sup>2</sup>	G - N - M
Grey, spheroidal and malleable cast iron	from 150 HB to 320 HB	V - N - E
Titanium and titanium alloy		T - E
Pure copper		G - N - E
Electrolytic copper		G - N - E
Brass / Bronze		G - N - E
Aluminium alloy < 10% Si		V - A - E
Aluminium alloy > 11% Si		V - E
Magnesium alloy		G - A - E
Thermoplastic material		V - E
Thermosetting resins		V - E
Stiffened synthetic material		V - E

\*Do not use negative lead-in on blind holes

Negative lead-in "N" can be used on large range of materials: please apply to our technical department.

## EXPANDING MONOBLOC REAMERS OLD SERIES - ONLY ON REQUEST

**Please Note:**

There are several series of reamers which we decided to don't put in the catalog. These reamers are still available on request. They are supplied in 4/6 weeks from the receipt of the order and it is requested a order minimum of 3 pieces for each diameter.

	Code	Series	Shank	Hole	Coolant	Diameter	Teeth
<b>EXPANDING REAMERS</b>	2420	short	cylindrical	through & blind	no	5,80÷20,10	straight
	2421	short	cylindrical	blind	central	5,80÷20,10	straight
	2440	short	cylindrical	through & blind	no	5,80÷32,10	straight

## Features & Benefits

- The ALVAN® cutting rings are modular and compatible with all the reamers indicated on page
- We supply a regrinding and re-brazing service of the damage and worn cutting edges (please consult our technical department).
- The cutting edges are in an asymmetric way to assure the best roundness of the hole
- Holes with restricted tolerances (ISO 5 and ISO 6) can be supplied and the expansion assures a perfect holding of the reaming diameter.
- The ALVAN® cutting rings are manufactured to the middle of the hole tolerance so they must be assembled and adjusted to the same diameter. It is important to comply with this direction in order to have a good functioning and life of the tool.
- LEFT HAND HELICAL FLUTES CUTTING RINGS from diameter 32,60÷200,59 mm ON REQUEST.

## Code Description of the Cutting Rings

**A** A= Cutting material and coated

Code	Description
2000-KT	Hard metal cutting edges K05
2TIN-KT	Hard metal cutting edges K05 N coated
2TIC-KT	Hard metal cutting edges K05 C coated
2TIA-KT	Hard metal cutting edges K05 A coated
2TLK-KT	Hard metal cutting edges K05 K coated
2TLH-KT	Hard metal cutting edges K05 H coated
2TLR-KT	Hard metal cutting edges K05 R coated
2TLT-KT	Hard metal cutting edges K05 T coated
2AVC-ST	Cermet cutting edges P10
2ANC-ST	Cermet cutting edges P10 N coated
2ACC-ST	Cermet cutting edges P10 C coated
2AAC-ST	Cermet cutting edges P10 A coated
2ALK-ST	Cermet cutting edges P10 K coated
2ALH-ST	Cermet cutting edges P10 H coated
2ALR-ST	Cermet cutting edges P10 R coated
2ALT-ST	Cermet cutting edges P10 T coated

*N.B. On request it is possible supply tools in Carbide K10 and Cermet P20*

**B** B= Lead-in

**C** C= Optional request:  
           Z = oversized tapering  
           H = half circular face

**D** D= Diameter and tolerance

*From 2023 codes will be changed, part A of description will become:  
 R400 for the straight cutting rings  
 R700 for helical flutes cutting rings  
 the code will follow as for the series 7000.  
 example:  
 R400-KNG-060000 N7  
 R700-SVE-060000 N7*

## HIGH SPEED FOR ALUMINIUM REAMING

Aluminium with silicon greater than 10% - brazed carbide with PKD

- Surface speed up to 1500 m/min
- When using PKD reamers a machine tool with high rigidity and absolute precision is a minimum requirement
- Each application must be assessed by our technical department

# LEAD-IN FOR STRAIGHT FLUTES

Lead-in 45° for standard speed

Lead-in 45° for high speed

"L" lead-in to reduce the feed of 40% compared with the values on pages 8-9

"F" lead-in to reduce the feed of 40% compared with the values on pages 8-9

"N" lead-in ideal for through hole. Is it possible to increase the feed up to 100% of the values on pages 8-9

Chipbreaker

# LEAD-IN FOR HELICAL FLUTES - from Ø 33,00

## APPROACH ANGLES

MATERIAL TO WORK	TENSILE STRENGTH	APPROACH ANGLE*
Iron and mild steel (C < 0,2%)	50 Kg/mm <sup>2</sup>	G - A - E
Mild steel (C 0,2 < 0,3%)	60 Kg/mm <sup>2</sup>	N - A - E
Mild steel (C 0,3 < 0,4%)	70 Kg/mm <sup>2</sup>	N - A - E

## Heads

### Features & Benefits

- Series: 7000-MC, 7000-ML, 7000-MM
- Diameter range from 11.80 to 80.60 mm.
- Heads are either fixed or expanding for improved productivity.
- Straight, left, or right hand helical flutes making through or blind holes achievable.
- Cylindrical or composite shanks for improved concentricity.

## Code Description of the Complete Brazed Heads

- A** A= Series
- 7400 Fixed head straight flutes
  - 7405 Expanding heads straight flutes
  - 7600 Fixed heads right hand helical flutes
  - 7605 Expanding heads right hand helical flutes
  - 7700 Fixed heads left hand helical flutes
  - 7705 Expanding heads left hand helical flutes

- B** B= Cutting material and coating

Code	Description
KL	Hard Metal cutting edges
KN	Hard Metal cutting edges N coated
KC	Hard Metal cutting edges C coated
KA	Hard Metal cutting edges A coated
KK	Hard Metal cutting edges K coated
KH	Hard Metal cutting edges H coated
KR	Hard Metal cutting edges R coated
KT	Hard Metal cutting edges T coated
KD	Hard Metal cutting edges D coated
SV	Cermet cutting edges
SN	Cermet cutting edges N coated

All mandrels are provided with radial through tool coolant.

**1<sup>st</sup> note** through hole reaming - order adjustment screw to suit through holes

**2<sup>nd</sup> note** blind hole reaming - order adjustment screw to suit blind holes. The drilled screw allows central through tool coolant.

**3<sup>rd</sup> note** mandrel 7001 fits only the locking screw for blind holes

**4<sup>th</sup> note** mandrels could be supplied also with Weldon 40 shank and L=190mm

All mandrels are provided with radial through tool coolant.

**1<sup>st</sup> note** through hole reaming - order adjustment screw to suit through hole

**2<sup>nd</sup> note** blind hole reaming - order adjustment screw to suit blind holes. The drilled screw allows central through tool coolant

**3<sup>rd</sup> note** mandrel 7001 fits only the locking screw for blind holes

**4<sup>th</sup> note** mandrels could be supplied also with Weldon 40 shank and L=255mm

## Series 5000 for high production

### Features & Benefits

- Series: 5400-5401-5600-5700
- Diameter range from 9,61 to 32,60 mm
- Oversized diameter range from 32,61 to 40,60 mm only on request
- Available in carbide or cermet, coated or uncoated
- Easy to assembly
- Easy to use
- Expanding heads only
- Straight, left or right hand helical flutes making through or blind holes achievable
- Cylindrical or composit shanks for improved concentricity
- Throw-away heads

## Code Description of the Heads serie 5000

**A** A= Series

- 5400 Straight flutes with radial coolant
- 5401 Straight flutes with central coolant
- 5600 Right hand helical flutes with central coolant
- 5700 Left hand helical flutes with radial coolant

**B** B= Cutting material and coating

Code	Description
KL	Hard Metal cutting edges
KN	Hard Metal cutting edges N coated
KC	Hard Metal cutting edges C coated
KA	Hard Metal cutting edges A coated
KK	Hard Metal cutting edges K coated
KH	Hard Metal cutting edges H coated
KR	Hard Metal cutting edges R coated
KT	Hard Metal cutting edges T coated
KD	Hard Metal cutting edges D coated
SV	Cermet cutting edges
SN	Cermet cutting edges N coated
SC	Cermet cutting edges C coated
SA	Cermet cutting edges A coated
SK	Cermet cutting edges K coated
SH	Cermet cutting edges H coated
SR	Cermet cutting edges R coated
ST	Cermet cutting edges T coated

**C** C= Lead in

**D** D= Specific requirement:  
H= half circular face  
Z = oversized tapering

**E** E= Diameter and tolerance

## LEAD-IN FOR STRAIGHT FLUTES

Chipbreaker

"V" Lead-in is recommended for high cutting speed

"F" Lead-in to reduce the feed of 40% compared with the values on pages 8-9

## LEAD-IN FOR HELICAL FLUTES

Helical left flutes: *For reaming through holes only*

Helical right flutes: *For reaming blind holes only*

"E" Lead-in is suitable for working most materials such as cast iron, steel and aluminium

"M" Lead-in allows an easier depth penetration in steels with a surface hardness greater than 200 HB

# TSA System

SINTERED SOLUTION  
**TSA**  
System

## Features & Benefits

- Series: 9400 - 9600 - 9700
- Diameter range from 11.80 to 40.60 mm.
- Heads are fixed and you have to throw away after use..
- Straight, left, or right hand helical flutes making through or blind holes achievable.
- Cylindrical or composit shanks for improved concentricity.

**A** A= Series  
 9400 Straight flutes  
 9600 Right hand helica flutes  
 9700 Left hand helical flutes

**B** B= Cutting material and coating

Code	Description
KL	Hard Metal cutting edges
KN	Hard Metal cutting edges N coated
KC	Hard Metal cutting edges C coated
KA	Hard Metal cutting edges A coated
KK	Hard Metal cutting edges K coated
KH	Hard Metal cutting edges H coated
KR	Hard Metal cutting edges R coated
KT	Hard Metal cutting edges T coated
AV	Cermet cutting edges
AN	Cermet cutting edges N coated
AC	Cermet cutting edges C coated
AA	Cermet cutting edges A coated
AK	Cermet cutting edges K coated
AH	Cermet cutting edges H coated
AR	Cermet cutting edges R coated
AT	Cermet cutting edges T coated

**C** C= Lead in

**D** D= Optional demand:  
 Z= oversized tapering  
 H= half circular face

**E** E= Diameter and tolerance

**SERIES 9400****STRAIGHT FLUTES****SERIES 9600****RIGHT HAND HELICAL FLUTES****SERIES 9700****LEFT HAND HELICAL FLUTES**

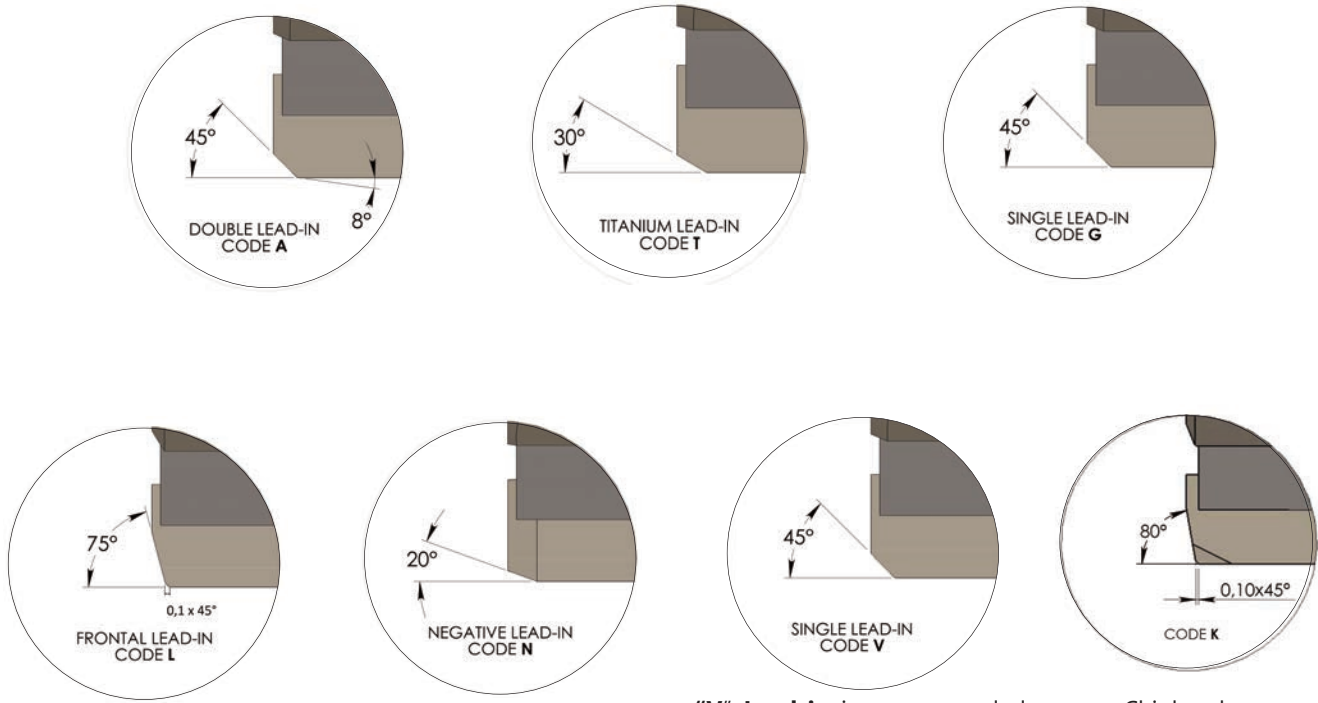

Ø D (mm)	a (mm)	number of teeth
11,80÷14,60	10	6
14,61÷17,60	10	6
17,61÷21,60	10	6
21,61÷26,60	10	8
26,60÷32,60	10	8
32,61÷40,60	10	10

**ADVANTAGE OF TSA SYSTEM**

The opportunity to replace the heads directly in the machine, without disassembly the mandrel from the basic shank, permits a reduction of dead times.

# LEAD-IN FOR STRAIGHT FLUTES

*Suggested to ream through and blind holes*

**"V" Lead-in** is recommended for high cutting speed

Chipbreaker

# LEAD-IN FOR HELICAL FLUTES

*Suggested only to ream through holes*

**"E" Lead-in** is suitable to work most of materials as cast iron, steel and aluminium

**"M" Lead-in** allows an easier depth penetration in steels with surface hardness greater than 200 HB

Hard metal or Cermet carbide uncoated

9000-MC-007	36,61 ÷ 40,60	185	245	32	9000-VI-006	9001-VI-006

Mandrel code without head and locking screw, they must be ordered separately.

Note:

- All mandrels are provided with radial tool coolant, suitable for working through holes.
- To ream blind holes is recommended to order their respective drilled screw that allows only axial coolant flow.
- Both types of screw do not protrude the head.
- Therefore, also the screw for through holes allows to ream counterborings.

### Short Series 9000-MM

Mandrel Code*	Ø D (mm)	B (mm)	Locking screw through holes	Locking screw blind hole
9000-MM-001	11,80 ÷ 14,60	65	9000-VI-001	9001-VI-001

9000-MM-006	32,61 ÷ 36,60	120	9000-VI-006	9001-VI-006
9000-MM-007	36,61 ÷ 40,60	120	9000-VI-006	9001-VI-006

\* Mandrel code without head and locking screw, they have to be ordered separately.

**Note:**

- All mandrels are provided with radial tool coolant, suitable for working through holes.
- To ream blind holes is recommended to order their respective drilled screw that allows only axial coolant flow.
- Both types of screw do not protrude the head.
- Therefore, also the screw for through holes allows to ream counterborings.

## RECOMMENDED VALUES FOR LUBRICANTS

It is important to use a good quality lubricant.

## LOCKING SCREW TORQUES

Diameter	Nm
11,80 ÷ 14,60	2.5
14,61 ÷ 17,60	3.5
17,61 ÷ 21,60	4.5
21,61 ÷ 26,60	6
26,61 ÷ 32,60	10
32,61 ÷ 40,60	12

## INSTRUCTIONS TO ASSEMBLY

# Modular System

## Features & Benefits

- Large range of shanks for different machine types
- Highly adjustable for improved concentricity
- All shanks are available with through coolant

## BASIC SHANKS DIN 69871/1 B+A <sup>[1]</sup>

<sup>[1]</sup> Basic shanks can be converted into DIN 69871/1A coolant by screwing the two plugs clockwise to the end of their stroke.

<sup>[2]</sup> The modular system has lateral clamping which enables efficient quick release of the tools. Light torque exerted on the clamping screw transmits high axial forces which provide stiffness and extreme accuracy to the assembly.

<sup>[3]</sup> All adaptors and tools with modular shanks require their respective tang fitted before assembly to the system with lateral clamping.

<sup>[1]</sup> The modular system has lateral clamping which enables efficient quick release of the tools. Light torque exerted on the clamping screw transmits high axial forces which provide stiffness and extreme accuracy to the assembly.

<sup>[2]</sup> All adaptors and tools with modular shanks require their respective tang fitted before assembly to the system with lateral clamping.

<sup>[3]</sup> Coolant clutch kits are supplied separately on request.

## OPERATING INSTRUCTIONS FOR LATERAL MODULAR SHANK

- Remove the tang from the lateral modular shank by loosening the clamping screw.
- Assemble the tang to the adaptor spigot which matches the lateral modular shank.
- Insert the adaptor with its tang into the reducer bore of the lateral modular shank.
- Lock the adaptor by tightening the clamping screw.

### ASSEMBLY FOR RADIAL ADJUSTING

**Note:** Only adaptors with modular reducer spigot are suitable for radial adjustment

Complete the operations mentioned above then proceed as follows:

- Lightly tighten the clamping screw so that the tang is still able to move in a radial direction.
- Correct eccentricity with the 4 adjusting dowels by bringing them into contact with the tang
- Tighten the clamping screw to lock the tang.
- Re-check for eccentricity, if required use the 4 adjusting dowels to correct and restore the value.
- Tighten the clamping screw to lock the adaptor.

**N.B.** Do not operate on items marked with red paint.

# Setup Instructions & Practical Suggestions

## EXPANDING & FIXED REAMERS

### 1) Diameter measurement

The diameter of the reamers and of the cutting rings is measured with a micrometer. We recommend the use of a comparator style micrometer with a least a 2  $\mu\text{m}$  resolution to avoid micro chipping of the cutting edges.

To allow setting of the reamer, two cutting edges are exactly  $180^\circ$  opposed.

These are marked with a dimple (see diagram below).

Measurement must be taken from the front of the cutting edges only.

### 2) Tolerance

Expandible reamer are ground to the middle of the tolerance.

Fixed reamer are ground at the 2/3 of the tolerance.

### 3) Expanding reamers adjustment

The adjustment must be made to compensate for wear to the cutting edges when the size reaches its lower tolerance.

This operation can be repeated several times until the surface finish of the hole deteriorates to an unacceptable level, then the reamer must be reground.

## ASSEMBLY - ADJUSTMENT - DISASSEMBLY

Series 2431 - 2441 - 3610 - 3617 - 3620 - 3627  
from Ø 5,80 to Ø 32,10 mm

### 1) Adjustment procedure

Turn the **right hand threaded** screw slowly clockwise, while checking the diameter setting of the reamer with a micrometer.

When the required diameter is achieved, the tool is ready for use.

## ASSEMBLY - ADJUSTMENT - DISASSEMBLY EXPANDING REAMERS WITH CUTTING RING with assembly and adjustment in the front

Series 4500 - 4500A - 4550 - 4550A  
from Ø 17,60 to Ø 100,59 mm

Series 4350 - 4330  
from Ø 17,60 to Ø 100,59 mm

Series 4300  
from Ø 17,60 to Ø 100,59 mm

### 1) Assembly

Insert the cutting ring (item 2) on the mandrel with the drive pins (item 3) assembled. Insert the conical ring (item 1). Screw the nut (item 5) and lock in manually: the thread is left handed.

We recommend lubricating the thread and the conical surface of contact between the cutting ring and the conical ring with antifriction Molycote grease.

### 2) Adjustment procedure

Turn the nut slowly, checking the diameter setting of the cutting ring with a micrometer, paying attention that the drive pins are in traction in the opposite direction to the cutting action of the reamer.

When the required diameter is achieved, the tool is ready for use.

### 3) Disassembly

Unscrew the nut.

Remove the components from the mandrel.

## ASSEMBLY - ADJUSTMENT - DISASSEMBLY EXPANDING REAMERS WITH CUTTING RING with assembly and adjustment in the front

Series 4505 - 4505A - 4555 - 4555A -  
from Ø 17,60 to Ø 100,59 mm

Series 4305 - 4355 - 4335  
from Ø 17,60 to Ø 100,59 mm

### 1) Assembly

Mount the cutting ring (item 2) onto the mandrel with the drive pins (item 3) assembled. Screw the conical ring nut onto the mandrel and lock it manually: **the thread is left handed**. Lubricate the thread and the conical surface of contact between the cutting ring and the conical ring with antifriction Molycote grease.

### 2) Adjustment procedure

Turn the conical ring nut slowly using a pin spanner (item 6) supplied with reamers from diameter 17,60 to 40,59 mm, checking the diameter setting of the cutting ring with a micrometer.

When the required diameter is achieved unscrew the conical ring until there is a click and the drive pins are in traction in the opposite direction to the cutting action of the reamer. The reamer is ready for use.

### 3) Disassembly

Unscrew the conical ring nut.  
Remove the components from the mandrel.

# ASSEMBLY - ADJUSTMENT - DISASSEMBLY EXPANDING REAMERS WITH CUTTING RING with assembly and adjustment in the front

Series 4350  
from Ø 100,60 to Ø 200,59 mm

## 1) Assembly

With the drive pins (item 3) assembled, mount the flange (item 5) onto the mandrel (Item 6).

Assemble the cutting ring (item 2) so that the slot on the left side of the dimple is mounted onto the drive pins. Insert the conical ring (item 1).

Screw the ring nut (item 4) onto the mandrel and tighten manually, so that the conical ring makes contact with the cutting ring: the thread is left handed.

We recommend lubricating the thread and the conical surface of contact between the cutting ring and the conical ring with antifriction Molycote grease.

## 2) Adjustment procedure

Turn the ring nut slowly (using a pin spanner) checking the diameter setting of the cutting ring with a micrometer, paying attention that the drive pins are in traction, in the opposite direction to the cutting action of reamer.

When the required diameter is achieved, the tool is ready for use.

## 3) Disassembly

Unscrew the ring nut.

Remove the components from the mandrel.

# ASSEMBLY - ADJUSTMENT - DISASSEMBLY EXPANDING REAMERS WITH CUTTING RING with assembly and adjustment in the front

Series 4355  
from Ø 100,60 to Ø 200,59 mm

## 1) Assembly

With the drive pins (item 3) assembled, mount the flange (item 5) onto the mandrel (Item 6).

Assemble the cutting ring (item 2) so that the slot on the left side of the dimple is mounted onto the drive pins. Insert the conical ring (item 1).

Screw the ring nut (item 4) onto the mandrel and tighten manually, so that the conical ring makes contact with the cutting ring: the thread is left handed.

We recommend lubricating the thread and the conical surface of contact between the cutting ring and the conical ring with antifriction Molycote grease.

## 2) Adjustment procedure

Turn the ring nut slowly (using a pin spanner) checking the diameter setting of the cutting ring with a micrometer, paying attention that the drive pins are in traction, in the opposite direction to the cutting action of reamer.

When the required diameter is achieved, the tool is ready for use.

## 3) Disassembly

Unscrew the ring nut.

Remove the components from the mandrel.

### 1) Diameter measurement

The diameter of the heads is measured with a micrometer. To avoid microchipping of the cutting edges, we would recommend the use of a comparator style micrometer with at least 2  $\mu\text{m}$  resolution.

The cutting edges are of an asymmetric design with two cutting edges exactly  $180^\circ$  opposed to allow setting.

Measurement must be taken from the front of the cutting edges only.

### 2) Tolerance

Expandable reamer are manufactured to the middle of the tolerance.

Fixed reamer are manufactured at the  $2/3$  of the tolerance.

### 3) Expanding heads adjustment

When the size reaches its lower tolerance the head can be adjusted to compensate for wear to the cutting edges.

This operation can be repeated several times until the surface finish of the hole deteriorates to an unacceptable level.

## - Remedies to possible difficulties -

DEFECT	CAUSE	REMEDY
1) HOLE TOO LARGE	<ul style="list-style-type: none"> <li>a) The reamer is running eccentric to the centre line of the machine spindle</li> <li>b) Excessive misalignment reamer works also at the end of the tapered part.</li> <li>c) Material build up on cutting edges</li> <li>d) The reamer diameter is too large</li> </ul>	<ul style="list-style-type: none"> <li>a) Use the adjusted mandrel</li> <li>b) Rectify misalignment or use the adjusted mandrel</li> <li>c) Replace the coolant or change the cutting speed</li> <li>d) Use smaller reamer or regrind existing one</li> </ul>
2) HOLE TOO SMALL	<ul style="list-style-type: none"> <li>a) The reamer diameter is too small</li> <li>b) The reamer diameter is worn</li> <li>c) The coolant is not suitable</li> <li>d) Stock allowance too small</li> <li>e) The cutting speed is too low</li> </ul>	<ul style="list-style-type: none"> <li>a) Use large reamer</li> <li>b) Expand, regrind or replace the reamer</li> <li>c) Replace the coolant</li> <li>d) Increase the stock allowance</li> <li>e) Increase the cutting speed</li> </ul>
3) TAPERED HOLE smaller in entrance than in exit	<ul style="list-style-type: none"> <li>a) Misalignment of the reamer respect to the holder</li> </ul>	<ul style="list-style-type: none"> <li>a) Correct misalignment or use the adjusted mandrel</li> </ul>
4) LIPPED HOLE larger in entrance than in exit	<ul style="list-style-type: none"> <li>a) Misalignment of the reamer respect to hole</li> </ul>	<ul style="list-style-type: none"> <li>a) Correct misalignment</li> </ul>
5) BURR AT THE ENTRY OF THE HOLE	<ul style="list-style-type: none"> <li>a) Excessive misalignment</li> </ul>	<ul style="list-style-type: none"> <li>a) Correct misalignment or use the adjusted mandrel</li> </ul>
